

3. Changing folder selection in MY IIM default view

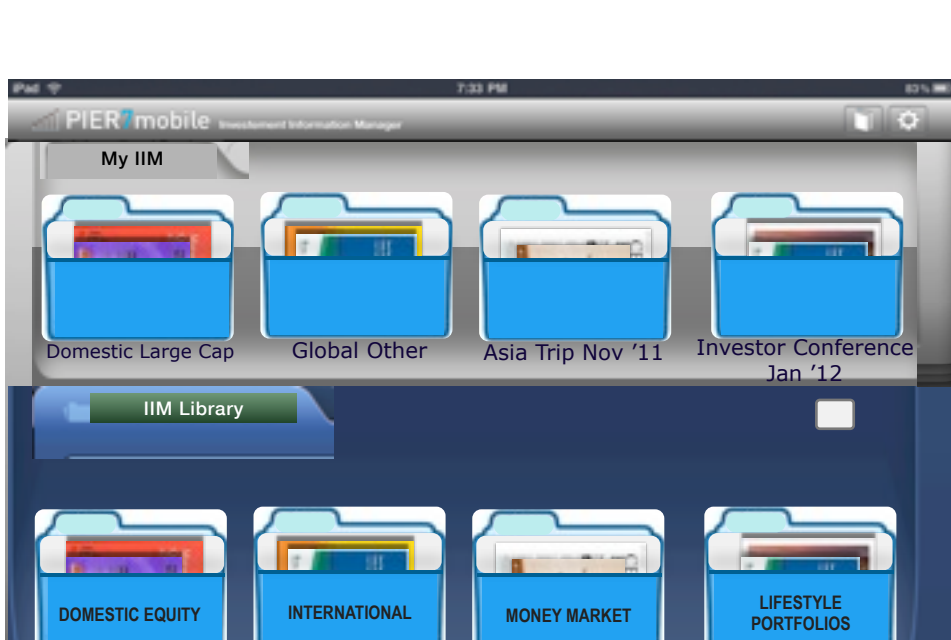

5. Accessing the IIM Library tab.

7. IIM Library view showing Domestic Equity Folder open

8. IIM Library view after manage content button pressed

9. IIM Library view within manage content mode, but with the folder view instead a single of files contents.

Views 4 & 5 show the different right margin tabs selected. Each time a new tab is selected the tab 'opens' and moves across the screen. The previously open tab moves back to it's position in the right margin

- Notes:
- It needs to be very clear from the tab colors which areas are related and which are completely separate.
  - The greatest contrast should be between MY IIM, which should follow the gray color scheme, and the public IIM Library, which should be green or blue. These two should be completely different
  - The other tabs (IIM News and Custom) should be complimentary to the gray of MY IIM and clearly different from the IIM Library.

- Notes:
- I used the blue background to indicate that this is a different view from the other tabs. It could be green as in the early versions that I sent to you.
  - Within this view, IIM Library, there are no notes. But I used the the notes area from MY IIM view to show fund specific news that will be available in the Library. If this is confusing then we should change the design of this area in the Library view. I also added a refresh button.
  - Selecting a new folder to view in the Library will work the same way as in the MY IIM view.

- 6a. Same function as button as shown in image 3a.
- 6b. Available folders in IIM Library (public) will be in this drop down in alpha order. When user selects a new folder in the pop up, the view in MY IIM will change to the new folder. (see orange arrow).

- 6c. User selects US Fixed Income from the library drop down and the open folder changes from Domestic Equity to US Fixed Income.

- Notes
- In view 7, the user has closed the "access folders" drop down that was being accessed in view 6 and returned to the IIM Library view. User is now ready to add content to their personal MY IIM folders. This is the same view as shown in #5 earlier.
  - In view 8, the user has activated the manage content function while viewing a specific folder in the IIM (public) Library (blue area).
  - When this occurs the tabs in the right margin are not active and disappear. New tabs appear above each of the two split windows clearly showing the user the two different areas and which files or folders they can access in each view.
  - Once in the manage content mode, the user can drag and drop content from the open IIM Library folder (Domestic Equity Fund) in the bottom half of the screen to any of the IIM folders in the MY IIM view at the top half of the screen.
  - The MY IIM view will scroll left and right to access other folders that are not viewable on screen; content from the open Domestic Equity Fund folder can be added to any other MY IIM (private) Folder.
  - If the user wants to select a different public library folder from the IIM Library than the one that is presently open, they can press the (file up icon) button (see note 8a) in the blue area which will change the IIM public Library view from the contents of a single folder (Domestic Equity Fund) to a view of ALL the FOLDERS available in the IIM Library. See view 9.

- Notes
- From the ALL FOLDERS view of the IIM Library the user can go back down a level to the Single File View to see the contents of an individual folder by double-tapping it. This action will reveal the contents of that specific folder.
  - As with the MY IIM view, the folder or file view of the IIM Library will scroll left and right.
  - Any file or the contents of any folder can be deleted by pressing and holding the item for [2] seconds until it shakes, then pressing the "x" to delete.
  - To return to the single screen view of MY IIM the user will press the Manage Content button in the navigation bar at the top.
